Shiffrin Blazes to Victory in Olympic Comeback

ERA SHAW/GETTY IMAGES

RED, WHITE, BLUE AND GOLD: U.S. skier Mikaela Shiffrin won the women's slalom Wednesday at the Olympics in Italy, adding to golds she amassed in 2014 and 2018. The 30-year-old overcame surgery after a crash and puncture wound in 2024. **A16**

Social-Media Bans for Youth Gain Momentum Worldwide

Places in Europe, Asia and the U.S. move to limit young teens' access to apps

By SAM SCHECHNER

PARIS—Moves to bar younger teens from social media across Europe and Asia are going, well...viral. What started as an isolated regulatory gamble by Australia last fall has spread to more than a dozen capitals, where leaders are seizing on issues raised by childhood scrolling

to appeal to parents across the political spectrum. It adds to a growing backlash against teenage smartphone use, which is being blamed by some critics for deteriorating mental health and an epidemic of screen addiction. From Paris to New Delhi, limits on children's access to apps like TikTok, Instagram and YouTube are now being debated or implemented, marking a tipping point in the conversation about regulating social media and a potential blockage in tech companies' pipeline of users. In the U.S., meanwhile,

Florida said it has started enforcing a ban on social-media use under age 14, and some states, including California and New York, have passed legislation requiring warning labels detailing potential harms to children and adolescents from social-media apps. Instagram owner Meta Platforms and YouTube, owned by Alphabet unit Google, are currently defending themselves in a landmark civil trial in California that focuses on the potential damage caused by social-media apps to teenage mental health. On Wednesday, Meta Chief Execu-

tive Mark Zuckerberg, in sworn testimony, defended his company's practices amid questions about his company's efforts to secure more of its users' time and attention. The CEO said Meta's growth targets reflect an aim to give users something useful, not addict them, and that the company doesn't seek to attract children as users. TikTok and Snap settled the case before trial. Lawyers for the companies have said their *Please turn to page A4*

U.S. Puts Most Air Power in Mideast Since '03

Trump weighs Iran strike amid massive buildup not seen since Iraq invasion

WASHINGTON—The U.S. is sending massive numbers of jet fighters and support aircraft to the Middle East, assembling the greatest amount of air power in the region since the 2003 invasion of Iraq.

By Lara Seligman, Michael R. Gordon, Alexander Ward and Shelby Holliday

The U.S. is ready to take action against Iran, but President Trump hasn't decided whether to order strikes—and if he does, whether the aim would be to halt Iran's already-battered nuclear program, wipe out its missile force or try to topple the regime. Over the past few days, the U.S. has continued to move cutting-edge F-35 and F-22 fighters toward the Middle East, according to flight-tracking data and a U.S. official. A second aircraft carrier loaded with attack and electronic-warfare planes is on the way. Command-and-control aircraft, which are vital for orchestrating large air campaigns, are inbound. And critical air defenses have been deployed to the region in recent weeks. The firepower will provide the U.S. the option of carrying out a sustained, weekslong air *Please turn to page A6*

Land Grab for Data Centers Is New Obstacle to Housing

Resistance grows to more land sales in Northern Virginia; 'They'd rather have homes than data,' says one local politician

By WILL PARKER

PRINCE WILLIAM COUNTY, Va.— Steve Alloy was preparing to develop 516 new homes in Bristow, Va., about five years ago when the home builder began noticing something odd. Much of the land surrounding his site wasn't being acquired by housing developers. It was being snapped up by tech giants such as Microsoft and Google. A few miles away, a housing development called Village Place had the rights to build an additional 250 housing units, but the owner sold the land to a data-center developer for \$31 million. Data-center developer

NTT later paid \$257 million for another vacant acreage. Land brokers started calling Alloy's company, too. "That was how we first kind of got attuned to, maybe this shouldn't be housing," said Alloy, chief executive of home builder Stanley Martin. By November of last year, the home builder was ready to cash in on the AI boom. Amazon.com, which wanted to build data centers, agreed to pay \$700 million for a portion of the land Stanley Martin had acquired several years ago for just over \$50 *Please turn to page A9*

JPMorgan's New Venture: A Bar

* * * Bankers clamor for limited seats; no day-drinking

By ALEXANDER SAEEDY

JPMorgan Chase's board of directors gathered late last year at Morgan's, an English pub on the 13th floor of the bank's ritzy new skyscraper. When a tray of Guinnesses was served, the people over-seeing America's biggest bank noticed a familiar face floating on the foam: Jamie Dimon's. A JPMorgan executive had told the bar's staff to use a high-tech printer near the taps to put Dimon's likeness on the heads of the stouts, hoping the boss and his friends might appreciate the joke. Dimon, who turns 70 next *Please turn to page A9*

Anthropic, Pentagon's 'Woke' Feud Escalates

When Anthropic was court-ting backers for its latest \$30 billion funding round in recent weeks, it approached an unlikely investor: 1789 Capital, a pro-Trump venture firm where one of the president's sons is a partner. *By Keach Hagey, Amrith Ramkumar, Deborah Acosta and Vera Bergengruen* After weighing a nine-figure investment, 1789 decided not to proceed, citing ideological reasons, according to people familiar with the matter. Among its concerns were Anthropic leaders' history of criticizing President Trump, the several former Biden administration officials on its payroll and its lobbying for artificial-intelligence regulation, the people said. Anthropic had no problem raising the capital it wanted from investors including Peter

Thiel's Founders Fund, Singapore's GIC and Coatue Management. But its spurned appeal shows that while the startup doesn't have money problems, it does have a growing political problem. The startup is the maker of Claude, the only large language model that can be used in classified settings, a status from the Defense Department that has been a competitive advantage. Anthropic forged a partnership with data company Palantir in 2024 and won a military contract worth up to \$200 million last summer. But it recently found itself in the Pentagon's crosshairs—a conflict that could send shock waves through the U.S. defense complex. The Pentagon wants to be able to use Anthropic and other AI tools for all lawful purposes. Anthropic doesn't want its technology used for operations including *Please turn to page A5*
